Spoke with ARS. They have all of the data in a GIS file and are happy to send to you/us. Said they had CPM to pCi/g correlation and have the extent pretty much delineated. Said there might be some overestimated boundaries due to shine, but wouldn't know for sure until they could peel back the asphalt. He thinks the contamination is fairly localized and thought that they could complete a removal within 2 days, at least that is what they proposed to the city. Planning to send the hot material they excavated to US Ecology in Idaho, the lower level material was slated to go to WCS. Said that they did not have any water intrusion into the hole they excavated and were not planning for that in future work.

Asked if they would be available for a call early next week and he said yes. Monday should be good for them. Would you like me to set up a call Monday morning between ARS, you, George, Weston, and anyone else? State?

Thanks

Sorry. I was already gone before I saw your question.

I've got something at 9. It should be quick. So before or after.

Just as an aside: I don't know if Weston has any targets or goals when it comes to subcontracting, such as small or disadvantaged companies. But ARS is part of the Aleut group. There is a special category that includes Aleut or native Americans from Alaska. It could really help your numbers if needed.

Guess she forgot to include me. She was very eager to keep ARS involved. I'll give them a call to see what data they have.

Spoke with Cheryn Robles with City of New Orleans. She said she was going to be sending an email to ARS and LDEQ stating that EPA was involved and to please release information to us. I haven't seen it come through yet. She was going to address to you. Have you seen anything?

I will try the city again now and follow up with an email. I think they will be happy to cooperate, especially if you all are saving them \$500 or more \$. We've worked with ARS in the past and they have always done a good job, solid firm. I think as long as the city provides them with the OK to release information to us, they will be an asset. Was speaking with Robert Sherman earlier today and we'll start putting together a QASP/Assessment plan for your review.

We thought we could start with the walkover survey and limited sampling to develop a correlation, and go from there. We have most of the language and procedures dialed in from the Tronox work and Three Rivers project.

Can also discuss using ARS as a sub to benefit from their site knowledge.

Will send an update shortly.

David

David,

As you recover and thing return to normal after Mardi Gras there in LA, can you tell me your expectations of getting the information from ARS or the City? I'm just trying to make some plans and get the others onboard.

I'm believing that ARS will have a pretty good report but I sure can't rely on the presentation that was sent from the City. There are just too many conflicting measurements.

The whole discussion on the site started with the big bosses, so they already have an interest in getting to the action as soon as we can.
